

## Latest news and events from Radiator Software

February 2018

### We are now Radiator Software

Radiator AAA server software was originally developed by Mike McCauley and the Australian company Open System Consultants Pty Ltd. Open System Consultants Pty Ltd and the Finnish Internet engineering company Arch Red Oy joined forces in 2013. They formed a Finnish-Australian company group, which continued developing Radiator-based products and services further.

This year we take an important step in unifying the brands and launching our new company name and brand, Radiator Software. We will use Radiator Software both in Finland and in Australia. In Finland, Radiator Software is the new official name of Arch Red Oy, while in Australia, Radiator Software is the auxiliary business name of Open System Consultants.

During Q1/2018 we will be sending more information about the new company name and other changes. Most importantly, we will be release a new Radiator Software website, providing a better experience for our new and current customers and showcasing Radiator Software's products and services.

### Radiator turns 20 years in 2018

Radiator AAA Server Software turns 20 years in 2018. We would like to thank our customers and distribution partners for the support. Originally developed for the needs of early Australian ISPs, Radiator has maintained its flexible development approach to satisfy the needs of a growing and diverse customer base. Nowadays, Radiator has thousands of active customers in over 180 countries and a network of over 50 distribution partners.

Radiator v4.20 will be released during Q1 this year along with Radiator VNF 2018 and other product releases.
